I study mechatronics at the Faculty of Technical Sciences in Novi Sad. At the beginning of the year 2021, I found a great passion for front-end development and started shifting my career interests toward that specific area of coding.

PREVIOUS EXPERIENCE

Student Jobs

During my studies, I had many different jobs. Some of which were associated with fast food (1.5 years), construction (3 months) and sound and lighting (4 months). If I learned one thing working in these environments that is definitely **teamwork**.

Fiverr, Music Producer
(July 2018 - March 2020)

I worked as a music producer, having most of my work revolve around ghost production, but I also had many projects that deviated from that area, such as mixing and mastering other people's projects. The main challenge of my job within ghost production was the sound design element, which meant that I was expected to design modern instruments and sounds that would meet the client's expectations and mix them well with other instruments to make the product sound professional and at the client's expectation level. Great skills that I acquired during this period are **working with clients** and **a great understanding of freelancing**.

Vega IT, Front-end Development Internship
(February 2022)

This internship was mostly based on turning website designs into code using HTML, CSS and JavaScript. The main accent was on organizing the code and working with reusable components using **BEM** class naming methodology. However, the internship helped me a lot with bringing my skills to the next level in terms of **responsiveness**, **SASS** and **"writing with less code"**.

EDUCATION

Mechatronics High School Degree. High School of Electrical Engineering "Mihajlo Pupin" Novi Sad.

Modern HTML & CSS From The Beginning (Including SASS) - Course

Modern JavaScript From The Beginning - Course

Svelte.js - The Complete Guide (incl. Sapper.js) - Course
